Title : Trophic Role of the Nervous System of the Embryo.  
Report 1. Role of the Nervous System in the De-  
velopment of the Chondriome in the Liver of the  
Embryo.

Orig Pub : Comun. Acad. RPR, 1956, 6, No 6, 349-854

Abstract : Hundred chicken embryos after 36 hour of incu-  
bation were used in the experiments; the prosen-  
cephalon was removed in the first group; the  
prosencephalon and diencephalon in the second  
group, the mesencephalon in the third group, and  
all three divisions of the brain in the fourth  
group of embryos. An investigation of the brain

Card 1/3

Rumania/General Biology. Individual Development B

Abs Jour : Ref Zhur-Biol., No 13, 1958, 57149

Abstract : and the chondriome of the liver was conducted in normal and experimental embryos 7.5 days after incubation. In all groups a considerable decrease in the sizes of the embryos as compared with normal was noted. Underdeveloped eyes were found in the first group; an absence of eyes and upper facial part of the head was observed in the second group; overdeveloped eyes were found in the third group; finally in the last group an absence of eyes and the upper facial part of the head was noted. Correspondingly, a decrease of the liver chondriome was observed in the first group, a complete absence of the chondriome was found in the second and fourth groups, and a considerable decrease in the 3rd group. Thus, the removal of the prosencephalon evoked an inconsiderable disturbance
